

SHAORAN LI

Senior Software Engineer at NVIDIA Corporation

◇ 540-998-1896 ◇ shaoran@vt.edu ◇ <https://shaoranli.github.io>

EDUCATION

Ph.D., Electrical Engineering , Advisor: Dr. Tom Hou <i>Virginia Tech, Blacksburg, VA</i> Dissertation: Coping uncertainty in wireless network optimization	Aug. 2017–Oct. 2022 GPA: 4.0/4.0
M.S., Information and Communication Engineering <i>Beijing University of Posts and Telecommunications (BUPT), Beijing, China</i> Thesis: Theory and hardware research of novel shaping coded modulation based on fast-than-Nyquist signaling	Sept. 2014–Mar. 2017 GPA: 87.95/100
B.E. (Honors Program), Information Engineering <i>Southeast University, Nanjing, China</i>	Sept. 2010–June 2014 GPA: 86.54/100

WORK EXPERIENCES

NVIDIA Corporation <i>Senior Software Engineer</i>	Oct. 2022–Present
NVIDIA Corporation <i>Software Engineering Intern</i>	May 2021–Aug. 2021
Virginia Tech <i>Graduate Research Assistant</i>	Aug. 2017–Oct. 2022

HONORS AND AWARDS

Distinguished Member of INFOCOM 2024 Technical Program Committee	Feb. 2024
Fred W. Ellersick MILCOM Award for the Best Paper, Unclassified Technical Program	Nov. 2019
Prasad Scholarship	Aug. 2019
Student Travel Grant, ACM MobiHoc	July 2019
Silver Medal Award in the 1 st 5G Algorithm Innovation Competition by the InnovateAsia	
FPGA Design Contest (4/184)	Dec. 2015
Third Prize in National Postgraduate Mathematics Contest in Modeling	Nov. 2015
Top Ten Annual Individuals	Dec. 2012
Third Prize in National Undergraduate Mathematics Contest in Modeling	Oct. 2012

TEACHING EXPERIENCES

Teaching Assistant

- | | |
|---|-----------------------|
| [T1] Signals and Systems, Virginia Tech | Aug. 2017–May 2018 |
| [T2] Principles of Communications, BUPT | Sept. 2014–June. 2015 |

Invited Seminar

- | | |
|--|-----------|
| [S1] Coping uncertainty in coexistence via exploitation of interference threshold violation, Wireless@VT Seminar | Nov. 2019 |
|--|-----------|

RESEARCH EXPERIENCES

- | | |
|--|-------------------|
| [P6] NVIDIA Aerial: GPU-accelerated 5G vRAN <ul style="list-style-type: none">• “Acceleration”: Provide 3GPP compliant and efficient 5G solutions with GPU parallel computing• Implement GPU-accelerated 5G wireless system with 3GPP compliance and explore new features beyond 5G• Design new software algorithms for wireless network functions• More info about NVIDIA Aerial SDK: https://developer.nvidia.com/aerial-sdk | Oct. 2022–Present |
| [P5] Wireless networking in presence of uncertainty <ul style="list-style-type: none">• “Uncertainty”: Optimize network performance when some network parameters are only known by statistics or limited data samples (e.g., channel uncertainty, task processing uncertainty)• Modeling of network optimization under uncertainty by exploring occasional threshold violation• Apply chance-constrained programming (CCP) to reformulate statistical formulation into deterministic one, and derive solutions with probabilistic guarantees (e.g., data rates, task deadlines) | May 2018–Present |
| [P4] Real-time optimization in wireless networking on GPU platforms <ul style="list-style-type: none">• Challenge: “Real-time”—Derive scheduling solution within $\sim 100 \mu\text{s}$ due to TTI length in 5G• Decompose the original optimization problem into massive subproblems, select a subset of promising subproblems, solve the subproblems in parallel, obtain the best feasible solution• Optimize GPU implementation regarding threads and memory management to meet real-time | May 2018–Present |

- [P3] **Deep Learning in PUCCH signal detection** May 2021–Aug. 2021
- “*Detection*”: Detect PUCCH discontinuous transmission (DTX) using deep learning
 - Algorithm tests and performance analysis in simulated 5G scenarios
- [P2] **Optimizing information freshness in wireless networks** May 2018–Oct. 2022
- “*Freshness*”: Employ Age of Information (AoI) in networking, a new and powerful metric
 - Modeling of network optimization problems under uncertainty (e.g., channel uncertainty, processing uncertainty)
 - Apply chance-constrained programming (CCP) and reformulate statistic formulation into deterministic ones
 - Derive solutions with probabilistic performance guarantees (e.g., data rates, task deadlines)
- [P1] **Link-level transceiver implementation on FPGA platforms** Sept. 2014–Mar. 2017
- “*FPGA*”: Implement transceiver on Intel and Xilinx FPGAs
 - Design baseband signal processing modules using Verilog HDL
 - Related topics: Sparse code multiple access (SCMA), faster-than-Nyquist (FTN), OFDM

PROFESSIONAL SERVICES

Technical Program Committee Member of ICC 2024	Nov. 2023
Technical Program Committee Member of INFOCOM 2024	Aug. 2023
Technical Program Committee Member of IEEE ICCCN 2023	Mar. 2023
Member of IEEE and IEEE ComSoc	Aug. 2017–Present
Reviewer of IEEE/ACM Transactions on Networking, IEEE Transactions on Vehicular Technology, IEEE Journal of Selected Areas in Communications, IEEE Wireless Communications, IEEE Communications Letters, IEEE INFOCOM, IEEE ICC, IEEE ICCCN	2018–Present

TECHNICAL STRENGTHS

Language	C/C++, CUDA, MATLAB, Python, Verilog HDL, and \LaTeX
Software	Visual Studio, Git, Matlab, Modelsim, Quartus, and Vivado
Skills	Professional knowledge in wireless communication and network research Hands-on experience of hardware implementation, especially on GPU and FPGA
